Unp Body Replacer Update Download

You might also want to read my tutorial, and start fixing the nifs you download before you install the mod they came with.. I switched them back to what they were originally in the vanilla Nifs so texture sets will work properly in the game and the CK.. The files sizes are smaller Something you might want to do on your own is go to meshes actors character character assets in your data folder, open the femalebody_0 nif and rename the NiNode from whatever it is to FemaleBody_0.. Body Slide set over from the CBBE version to a UNP version Nov 17th Update This is just a UNP Body Type Replacer.. Every nif (and I do mean every single fucking one) was WRONG I fixed all of that.. The armor and clothing meshes are not skimpy/skinny/animated/jiggly or anything else.. I repathed all of the body part BSShaderTextureSet branches to what they need to be, and that is femalebody_1 and the support textures.. I also included a UNP foot fix as a separate upload, for those who want it Why do you need this? You really don't unless: • you're tired of running out of memory and your game crashes because it is trying to process texture swaps that will never happen for every female NPC in a cell.

nif Do the same thing for femalebody_1 and rename that NiNode to FemaleBody_1 nif.. That mesh is not a resource Dawnguard and Dragonborn files are also available This mod fixes: • the NiTriShapes renames in the Nifs that were wrong.. • you simply want UNP mesh replacers that are fixed Another bonus is these fixes reduced most of the kb size of the nifs by about 200.. Credits: dimon99 Exeter Phigit and ME for fixing everything that was fucked up Permissions: The usage terms of the files in this upload are retained by the original authors.. • the texture file paths to folders that didn't exist, paths to Astrid's crispy body textures and paths to textures that no one has.

They are basic replacers for every vanilla outfit that shows skin aside from Nocturnal's robe.. • you are tired of a cell loading and every female NPC there has mismatched body textures that look dark or like they absorb light.. • the jacked Nif Num UV Sets and Has Normals values in the NiTriShapeData branch back to what they need to be.. What's New in Version 1 0 0. Hmmm I'm tossing Project: Unified UNP's This is a fix for the broken UNP vanilla mesh replacers available at Nexus.
